**How to fix audio issues in CapCut (mobile)**

After recording and importing your audio into CapCut to edit it, you may notice issues such as too much background noise or a delay. But, luckily, there are solutions.
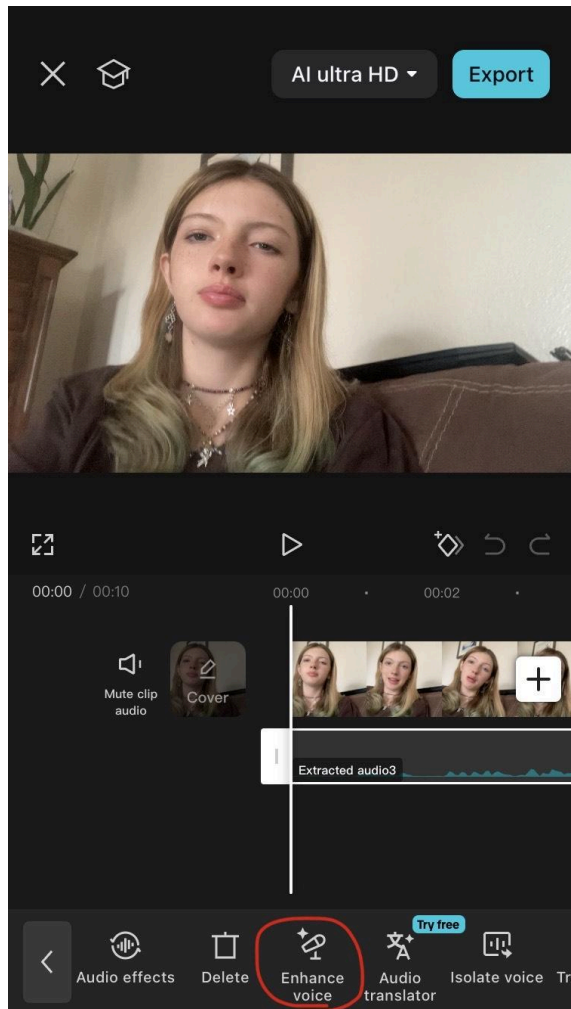

For a sound delay what you can do is select the clip > Extract Audio.

Then trip out the mess up part of your audio and realign it to match your video.
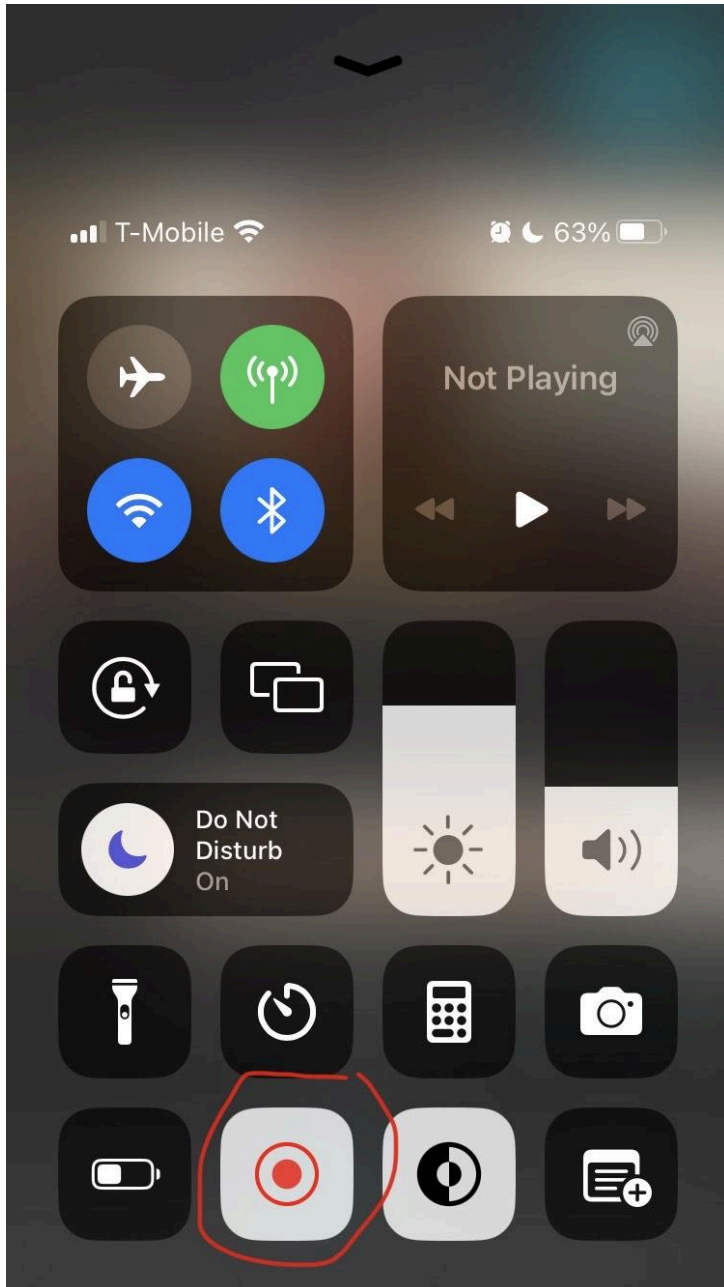

For Too much background noise select the clip > Extract Audio.
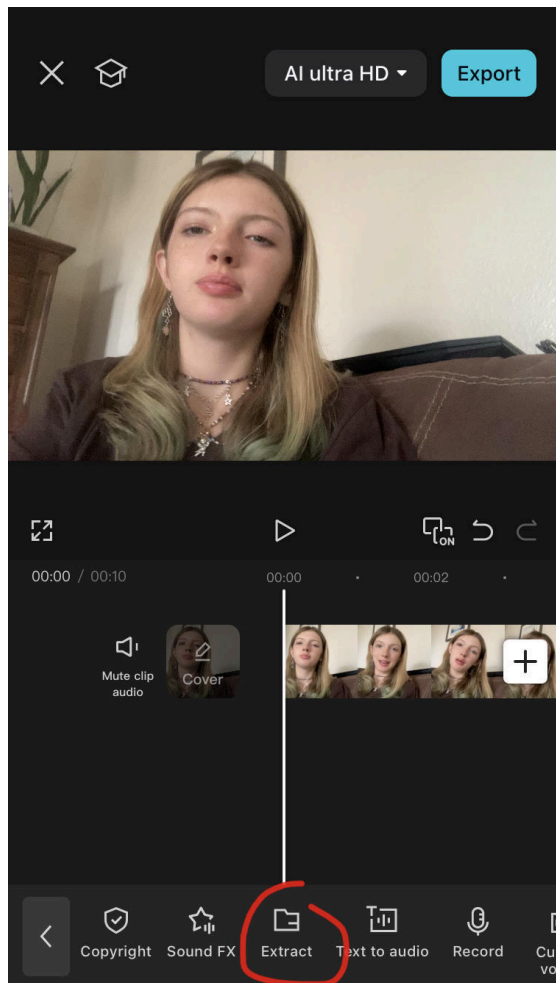

Take the audio clip and use Enhance voice.

However this feature is a premium feature, but here's a way to get around it.

Screen record the whole audio clip.

Go to audio > Extract > click your new screen recording

Trim it to fit and realign it.

There's also a website you can use to fix the audio issues as well.
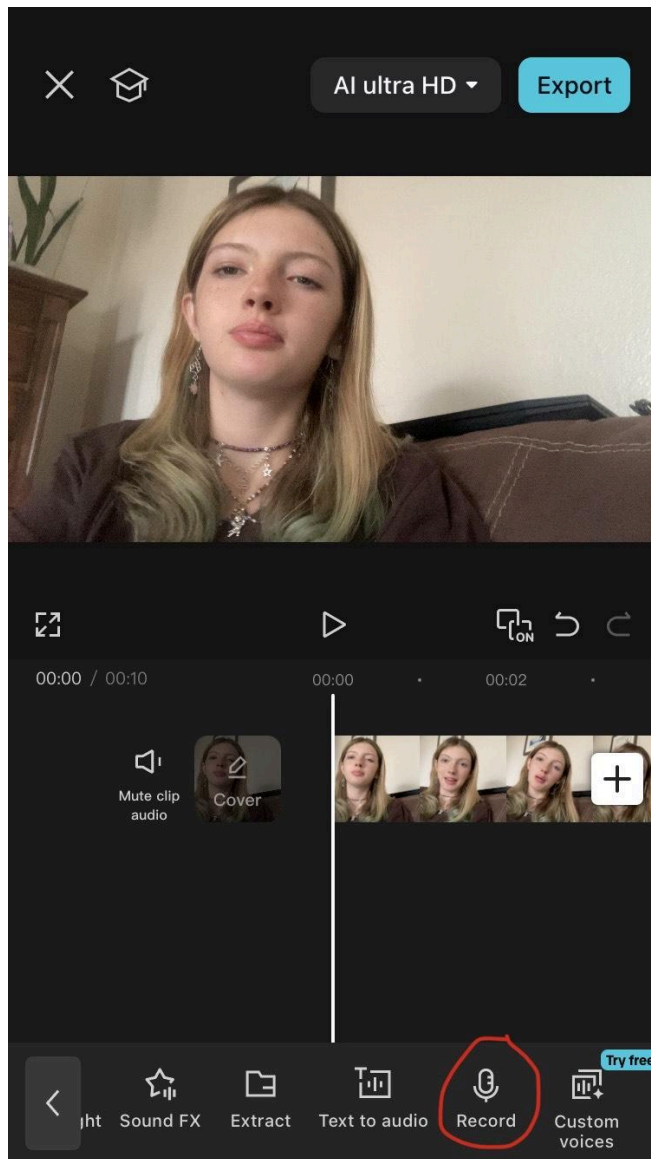

You can use:

Adobe podcast
Canva
Or other things if you wanna try them.

Lastly, you can alway re record audio clips as well.

Go to audio > Record

Using these tips you can solve almost any audio issue and make it sound alright.
